Spindle Nut

Keyed Washer / Screws Included · Titanium · Natural · 10 Degree Front Spindle · Sprint Car

PART NUMBER
TIP2858
View on PriceGuidePro ›

OVERVIEW

The spindle nut sets front wheel bearing preload and is the single fastener holding the hub on the spindle, so it has to stay put through every impact the front end takes. A nut that backs off changes bearing clearance and can put a wheel at risk. This titanium kit locks positively with a keyed washer and screws instead of relying on thread friction alone, and it is sized for 10 Degree front spindles.

Titanium keeps the weight down at the far end of the suspension where it matters most.

Titanium locking spindle nut with keyed washer and screws for 10 Degree spindles. This spindle nut is super strong and lightweight.
