PART NUMBER

Axle Tether

MPD10500

Clamp / Hardware Included · Aluminum · Black Anodized · 2-1/2 in Axle Tube

OVERVIEW

A broken front axle on a winged sprint car can put the wheel and axle into the racing surface or the fence, which is why tethers moved from optional to mandatory at most tracks. This complete kit is the 2-1/2 Inch axle tube version, the most common size, and connects the front axle to the front motor mount tube so the axle stays with the car. Installation is straightforward with no welding or drilling of the axle required.

Kit includes two billet clamps, two 31 Inch tethers and all hardware.

SPECIFICATIONS

Location / Position	Axle
Color	Black
Finish	Natural
Length	31"
Intended Axle Tube Diameter	2-1/2"
Tether Quantity	2
Clamp Quantity	2
