PART NUMBER

Axle Tether

MPD10506

King Pin to King Pin · Hardware Included · 50 in Axles

OVERVIEW

King pin to king pin tethers run across the front of the car rather than back to the frame, tying the two king pins together so the axle assembly is retained from both ends. This kit is cut for 50 Inch axles, the shortest in the MPD range. Measure your axle before ordering, because a tether cut for a longer axle will hang slack and one cut short will not reach.

Hardware included, sold as a kit.

This king pin to king pin axle tether kit is designed for 50 Inch axles and is required by World of Outlaws and many other Sprint Car sanctioning bodies and tracks. Helps retain the axle in the event of a failure or disconnection. Hardware is included, sold as a kit.
