Wheel Spacer

PART NUMBER
MPD16424

6 × 5 in Bolt Pattern · 0.375 in Thick · Aluminum · Natural

OVERVIEW

A 3/8 Inch spacer gives a meaningful track width change for cars that need real clearance between the wheel and brake components, or when chassis setup calls for a wider front stance. Racers often keep this thickness on the trailer alongside thinner spacers so several combinations can be stacked to hit an exact offset. Machined from aluminum with a 6 × 5 Inch bolt pattern for 6 pin sprint car front hubs.
