Master Cylinder Return Spring

Aluminum / Steel · Black Anodized / Black Powder Coat

OVERVIEW

Return spring kit for sprint car master cylinders, supplying the steel return spring and the aluminum retainer plate that holds it. The return spring is what pulls the pedal back and lets the master cylinder piston fully retract, and a tired spring shows up as a pedal that does not come all the way back and brakes that drag. Black anodized retainer with a black Powdercoat spring.

Kit includes black anodized aluminum retainer plate and black Powdercoat steel return spring. For Sprint Car master cylinder applications. Sold as a kit.
