PART NUMBER

Brake Caliper Bracket

MPD28300

Front · DMI Style · Aluminum · Black Anodized

OVERVIEW

Front mount caliper bracket in the DMI pattern, machined from aluminum and black anodized. The front mount position puts the caliper ahead of the axle centerline, which is the layout most DMI-based front ends are built around. Getting the right bracket style matters because caliper position determines pad alignment on the rotor, and a mismatched bracket will not let the caliper sit square.

Built for 10-1/8 Inch rotors. Sold as a kit.

Aluminum front brake mounts are built for 10-1/8 Inch rotors and come in a variety of styles. This is the DMI-style front mount brake bracket in black anodized. Sold as a kit.

SPECIFICATIONS

Location / Position	Front
Material	Aluminum
Color	Black
Finish	Anodized
Mounting Style	Front Mount
Style	Dmi Style
Intended Rotor Diameter	10-1/8"
Sold As	Kit

SHIPPING & PACKAGING
