Torque Ball Housing

4.45 in ID · Aluminum · Black Anodized · Sprint Car

OVERVIEW

Torque ball housing machined from billet aircraft aluminum with a 4.45 Inch inside diameter, black anodized. The housing takes the load from the torque ball as the rear end moves through its travel, so its strength sets the limit for the whole driveline joint. Supplied as a complete kit.

Machined from black anodized billet aircraft aluminum, these 4.45 Inch torque ball housings are the strongest torque ball housings on the market. It is the only housing on the market that pivots in the same linear pattern as the U-joint, letting your car drive harder and roll freer. Sold as a kit.
