PART NUMBER

Shifter Assembly

MPD84000

Positive Camlock · Locking · Frame Mount · Weld-On Bracket · Aluminum · Black Anodized · Sprint Car

OVERVIEW

Weld-on push lock shifter with a positive camlock system that locks the car firmly into gear. A spring-loaded lever holds position in either gear, so the shifter will not walk out under the vibration and impacts of a race. Welding gives the most secure mount where a permanent installation is acceptable.

Black anodized aluminum. Sold individually.

Our lightweight shift levers have a positive lock system to securely lock the car into gear. Spring-loaded lever locks into place in either the in or out position. The black anodized shift lever is offered in both a weld-on or clamp-on style.

This is the weld-on version. Sold as a kit.
