PART NUMBER

Shifter Assembly

MPD84000C

Positive Camlock · Locking · Frame Mount · Clamp-On Bracket · 1-3/8 in OD Tubes · Aluminum · Black Anodized · Sprint Car

OVERVIEW

The clamp-on version of the MPD push lock shifter, mounting to 1-3/8 Inch frame tubes without welding. Clamping means the shifter can be repositioned for driver comfort or removed entirely, which suits a car that gets reconfigured between events. Same positive camlock and spring-loaded lever as the weld-on version.

Black anodized aluminum.

Our lightweight shift levers have a positive lock system to securely lock the car into gear. Spring-loaded lever locks into place in either the in or out position. The black anodized shift lever is offered in both a weld-on or clamp-on style.

This is the clamp-on version for 1-3/8 Inch OD tubes. Sold as a kit.
