PART NUMBER

Shifter Assembly

MPD84016

Positive Camlock · Locking · Cable · Frame Mount · Aluminum · Black Anodized · Sprint Car

OVERVIEW

Lever lock shifter operating by cable rather than a direct linkage, letting the shifter be mounted where the driver wants it while the cable routes to the transmission. Uses the same positive camlock system that holds the car securely in gear. Frame mount, black anodized aluminum.

Our lightweight shift levers have a positive lock system to securely lock the car into gear. Spring-loaded lever locks into place in either the in or out position. This is the cable-operated lever lock shifter assembly, frame mount, in black anodized aluminum.

SPECIFICATIONS

Material	Aluminum
Color	Black
Finish	Anodized
Sold As	Kit
