OVERVIEW

Jacob's Ladder pins are what you pull to change the ladder pickup point, making them among the most frequently handled parts during a setup change. A seized or bent pin turns a two-minute adjustment into a fight. Quick pin designs release cleanly even packed with mud.

Titanium and steel versions trade weight against cost.

Change your Jacob's Ladder quickly with our Quick Pin Ladder kits. Kits include a 3-3/4 Inch long chassis pin for chassis that have the top and bottom ladder tabs instead of a spud. Complete Kit Contains: (2) 3/8 Inch x 3-3/4 Inch (from bottom of head) Jacob's Ladder pins (titanium or steel) with clips, 1/2 Inch Pin (titanium or steel) and rue clip with easy-to-remove handle for the Jacob's Ladder to birdcage, (2) Nylatron spacers for Jacob's Ladder straps.
