OVERVIEW

Birdcage adjusters let you move the Jacob's Ladder pickup point to change rear roll center, which is one of the highest-leverage setup adjustments available. Being able to make that change in minutes instead of unbolting the assembly is what makes it usable trackside. Precise increments mean the adjustment is repeatable rather than guesswork.

Adjuster hardware works under load constantly, so quality affects how long it stays accurate.

Replacement birdcage component. Adjuster Block Set. Fits Adjustable Cages Only.

Ti22's Pro Birdcages are machined from 7075-T6 aluminum with a 28mm double-row angular contact bearing. The line features standard right and left cages, as well as the new Adjustable Birdcage. The adjustable feature allows for adjustment of the Jacob's Ladder pick-up point to meet changing track conditions, giving racers a competitive edge.
