Torsion Bar Bushing

1-1/8 in ID · Bronze · Natural · 0.095 in Thick · Sprint Car

PART NUMBER
TIP2340-10
View on PriceGuidePro ›

OVERVIEW

Torsion bar bushings support the bar where it passes through the chassis, letting it twist freely without metal-on-metal wear. A worn bushing lets the bar move where it should not, changing how the corner loads. Low-friction materials keep the bar acting like a spring rather than binding.

Bushings are inexpensive wear items that are worth replacing on a schedule.

Manufactured from friction-reducing bronze or lightweight, durable plastic. Bushing has a 1-1/8 Inch I.D. and 0.095 Inch wall. Sold each or in packs of ten.

SPECIFICATIONS

Material	**Bronze**
Finish	**Natural**
Thickness	**0.095 Inch**
Inside Diameter	**1-1/8 Inch**
Vehicle Type	**Sprint Car**
Sold As	**Set of 10**
