Torsion Arm Stop

1.75-48 in Spline · Hardware Included · Chromoly · Black Powder Coat · Sprint Car

PART NUMBER
TIP2380
View on PriceGuidePro ›

OVERVIEW

A torsion stop locks the torsion bar to the arm and sets the preload that determines how the corner carries weight, making it one of the most frequently adjusted parts on a sprint car. A stop that slips or rounds out its splines will quietly change your setup mid-race with no obvious cause. This chromoly stop grips the 1.75-48 spline securely and stands up to repeated wrenching far better than a soft aluminum unit.

Hardware is included, and the black finish helps it survive the abuse of a full season.

With multiple options available, Ti22 has torsion stops for any budget, from lightweight aluminum to titanium for the ultimate in performance. Feature 1-3/4 Inch split. Aluminum stops include steel pinch bolt and adjuster bolt.

Chromoly stops include steel pinch bolt and steel adjuster bolt, and titanium models include titanium hardware. See below for upgraded titanium adjuster bolt.

SPECIFICATIONS

Material	**Chromoly**
Finish	**Black Powdercoat**
Spline	**1.75-48 Inch Spline**
Vehicle Type	**Sprint Car**
