Spindle Nut

Keyed Washer / Screws Included · Steel · Cadmium / Zinc Oxide · 10 Degree Front Spindle · Sprint Car

PART NUMBER
TIP2856
View on PriceGuidePro ›

OVERVIEW

The spindle nut sets front wheel bearing preload and is the fastener holding the hub on the spindle, so it must stay put through every impact the front end takes. A nut that backs off changes bearing clearance and puts a wheel at risk. Keyed washer and screw designs lock positively rather than relying on thread friction.

Titanium keeps weight down at the far end of the suspension.

Spindle Steel Lock Nut, Steel, Each.
