Setup Blocks

Tall · 3 to 6-1/4 in Adjustable · Magnetic Base · Aluminum · Black Anodized

PART NUMBER
TIP2981
View on PriceGuidePro ›

OVERVIEW

Setup blocks hold the chassis at a known ride height so you can measure and adjust suspension on a flat surface. Without repeatable blocks, no setup number means anything from week to week. Adjustable designs let you replicate the ride height a setup sheet calls for.

Magnetic bases keep them planted on steel tubing while you work.

Aluminum blocks feature a contoured bottom with integrated magnets to hold tight to steel tubing or any flat steel surface. Quick-release pin keeps the block at the desired height. Short blocks adjust from 1-3/4 Inch to 4 Inch and tall blocks adjust from 3 Inch to 6 Inch.

Sold in pairs. Available accessories include set-up rollers with easy rolling wheels, or set-up cups to securely cradle axle tubes.
