Steering Arm

Combo · Passenger Side · Aluminum · Clear Anodized · Sprint Car

PART NUMBER
TIP3013
View on PriceGuidePro ›

OVERVIEW

The steering arm converts drag link movement into wheel angle, setting your steering ratio and Ackerman geometry. Because it hangs off the spindle, both strength and weight matter here. Billet aluminum construction resists the bending loads a rutted track puts into the front end while keeping unsprung mass low.

Correct mount and offset dimensions are what keep the front end responding the way the setup sheet intends.

Ti22 Front Steering Arms are built with 2024 aluminum for strength and durability. 3 Inch mount, 1 Inch offset with a 5-3/4 Inch split. Black or Plain finish.

SPECIFICATIONS

Material	**Aluminum**
Finish	**Clear Anodized**
Style	**Combo**
Location	**Passenger Side**
Vehicle Type	**Sprint Car**
Sold As	**Kit**

SHIPPING & PACKAGING

Package	**10.75 × 3.9 × 1.5 in**
