OVERVIEW

Wing post sliders let you change wing height and angle without unbolting and refabricating parts, turning an aero adjustment into a quick between-heats change. Being able to move the wing quickly is how teams chase a changing track. Machined designs resist binding so the adjustment still works when covered in mud.

Sliders take load constantly, making a spare worth keeping.

Top Wing Tree Adjuster Insert, black. Adjustable wing post slider, chromoly with a black Powdercoat finish, for the top tree. For 600 micro / mini sprint.

Sold each.
