OVERVIEW

Brake lines are a safety item that live in the worst possible environment, exposed to heat, debris, and the constant flex of suspension travel. A line that chafes through or bursts under pedal pressure takes your brakes with it. These Kevlar lines use the same fiber found in ballistic vests, giving them burst strength and abrasion resistance well beyond rubber hose, with crimped aluminum ends that will not weep.

At 24 Inch with 3 AN straight fittings, this length suits common front and rear routing.

24 Inch Long. Constructed from the same material bulletproof vests are made from. These Kevlar brake lines are the strongest brake lines on the market.

They are very flexible and feature crimp swedged straight aluminum ends.
