OVERVIEW

Fine-tune engine placement in your sprint car with Ti22 Performance engine plate wedges. Installed at the front motor plate, this pair lets you raise the engine up to 1/2 Inch to dial in engine height and angle.

Each wedge is made from 0.375 Inch thick aluminum and finished in black anodize for durability, corrosion resistance, and a clean look in the engine bay. An easy way to make engine height changes during setup without fabricating new mounts.

Features and Benefits:

Fitment Notes:
