OVERVIEW

Radiator hoses carry coolant between engine and radiator in an environment of heat, vibration, and constant flexing. A collapsed or split hose puts an engine at risk within a lap. Molded silicone holds its shape under suction and resists heat cycling far better than generic rubber.

Correct bend and diameter mean no kinks and no restriction in the cooling circuit.

Molded silicone hose is built specifically for sprint car lower radiator hose applications. Molded 90 Degree elbow and 45 Degree elbow separated by 5 Inch fits most combinations of Sprint Car radiator and pump.
