OVERVIEW

The fuel block splits a single feed into multiple outlets, letting one line from the pump serve several injector runs. Doing that with a maze of tees invites leaks and pressure imbalance. Billet aluminum construction with correct AN porting keeps the plumbing tidy and sealed.

Integrated brackets on some versions remove the need for a separate mount.

Black anodized billet aluminum 100-micron fuel filters. Available in 6 AN, 8 AN, 10 AN, and 12 AN. Stainless steel replacement elements available.
