OVERVIEW

Wing adjusters let the driver or crew change wing angle to trade downforce for straightaway speed as the track changes. On many tracks that adjustment is worth more than any spring change. Manual and cylinder-driven versions cover different rule packages and preferences.

Adjusters work under aero load constantly, so build quality determines how long they stay precise.

Manual sliders allow easy wing adjustment and are machined to resist binding.

SPECIFICATIONS

Material	**Aluminum**
Finish	**Black Anodized**
Style	**Manual**
Collapsed Length	**20 Inch**
Extended Length	**31 Inch**
Hardware Included	**Clip**
Sold As	**Kit**
