OVERVIEW

Getting a sprint car off the ground is a routine part of every teardown, tire change, and setup session, and doing it with jack stands and muscle wastes time and invites injury. A purpose-built lift raises the car level and holds it there so one person can work underneath safely. This aluminum unit provides up to 14 Inch of lift, enough to pull wheels and reach driveline components, and the aluminum frame keeps it manageable to move around a shop or trailer.

Anything that shortens a between-race turnaround pays for itself over a season.

Durable, portable lift provides up to 14 Inch of lift to provide easier maintenance and repair of sprint cars, in the shop and at the track. Compact frame measures 48 Inch L x 31-3/4 Inch W x 14 Inch H, and folds down to 3 Inch thick for convenient storage. Lightweight unit weighs only 67 pounds, with an integrated 120VAC hydraulic pump that allows it to lift up to 4,000 lbs. Black anodized aluminum frame with Powdercoat steel center section bars.

SPECIFICATIONS

Material	Aluminum
Vehicle Type	Sprint Car
Load Capacity	4000 Pound
Sold As	Each

SHIPPING & PACKAGING

Country of Origin	USA
Vehicle Type	Car
